

Don't Miss Opportunities to Vaccinate!

Screen for Immunizations at Every Opportunity

Did you know?

Approximately 50,000 adults die each year from vaccine-preventable diseases in the U.S.

- Together, pneumonia and influenza illnesses are the fifth leading cause of death in older adults in the U.S.
- According to the Centers for Disease Control and Prevention, 1.25 million people are infected with the hepatitis B virus. This virus attacks the liver and can cause liver cancer, liver failure, and death.
- Pertussis (whooping cough) is usually a mild illness for adults, yet deadly for infants. The disease is easily spread from adults, who may not even realize they are sick, to infants too young to be vaccinated.

Keep your vaccinations up to date.

Vaccines recommended for adults:

Ask your healthcare provider to check your current vaccination status. Check with your insurance provider to see if these vaccines are covered:

- Human Papillomavirus (HPV)
- 1 Tetanus-diphtheria-pertussis (Tdap)
- Tetanus-diphtheria (Td) booster every 10 years
- Hepatitis A
- Meningococcal
- Measles-mumps-rubella (MMR)
- Varicella (chickenpox)
- Seasonal influenza
- Zoster (shingles)
- Pneumococcal
