

# National Influenza Vaccination Week

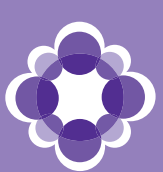

## It's not too late to fight the flu.

**As long as you have vaccine available, offer it to every patient who enters your clinic or office.**

Influenza is unpredictable. Different types and strains of influenza circulate throughout the flu season. The Centers for Disease Control and Prevention's (CDC) Advisory Committee on Immunization Practices (ACIP) recommends that influenza vaccine be offered throughout the influenza season — even after influenza appears in your community. Set an example — get vaccinated to protect yourself and those around you.
